

GUNVANTH MADABATTULA

Ph: +91 6303157119 **Email:** gunvanth752004@gmail.com **LinkedIn:** Madabattula Gunvanth **GitHub:** Gunvanth/gunwanth

Professional Summary

Full Stack AI-ML Engineer with hands-on experience building production-grade intelligent systems — spanning RAG pipelines, LLM-powered chatbots, and AI-driven web platforms. Proficient across the stack with React.js, Node.js, Python, and Firebase, with applied exposure to agentic AI, broker API integrations, and vector search architectures

Education

Gayatri Vidya Parishad College of Engineering
B.Tech in CSE (AI & ML) CGPA: 7.8 / 10

Nov 2022 – Apr 2026
Visakhapatnam

Skills

Languages / Tech: Python (OOps), Java, JavaScript, Agentic AI, Machine Learning
Frameworks: HTML, React.js, Node.js, TypeScript, JWT, RESTful APIs, RAG
Databases: PostgreSQL, Firebase
Tools: Git, GCP, LLMs, Postman, GTM, Express.js

Internships

Google Cloud Generative AI Intern, AICTE Eduskills Cohort-9
Remote

Jul 2024 – Sep 2024

- Conducted lab performance metrics using Google Cloud Console and prompt engineering techniques.
- Worked with API services and cloud-based storage systems, gaining exposure to cloud architecture principles and efficient bucket-based data management.

Data Analyst Intern, Naveen PVC Bend Works & Marketing Agencies
Visakhapatnam

Jan 2025 – Mar 2025

- Gained practical experience in server management systems, data analysis techniques, and structured data handling for performance and reliability.
- Created 5+ interactive Power BI dashboards and tables for sales performance tracking, reducing reporting time by 40%.

Full Stack AI-ML Engineer Intern, AAVI Labs
Visakhapatnam (On-site)

Mar 2026 – May 2026

- Engineered and deployed a fully functional AI Chatbot platform integrating multi-turn conversation management, real-time API orchestration, and a rubric-based evaluation framework to ensure response quality and consistency.
- Implemented Retrieval-Augmented Generation (RAG) pipelines using vector databases and semantic search, enabling the chatbot to retrieve and ground responses in domain-specific knowledge bases with high accuracy.
- Developed AGI-style search capabilities leveraging LLM-powered intent recognition, query decomposition, and multi-source aggregation to deliver intelligent, context-aware search experiences.

Projects

StockGenius – AI-Powered Stock Trading Platform

Python, FastAPI, React.js, LLMs, Broker APIs

- Collaborated in building an AI-powered stock trading platform featuring intelligent stock recommendations, automated trading agents, portfolio management, and paper trading simulations.
- Contributed to AI-driven stock analysis using financial indicators, sentiment analysis, and predictive analytics pipelines.
- Assisted in integrating broker APIs for real-time portfolio synchronization, order management, and end-to-end trading workflows.
- Developed user-focused features including personalized financial learning modules, authentication systems, and subscription management.

- Developed a full-stack service website for AAVI Labs using React.js and Tailwind CSS on the frontend, delivering a responsive, component-driven UI with clean visual hierarchy.
- Built a robust backend with Node.js, Express, and TypeScript, featuring CORS middleware, modular route handling, and RESTful API endpoints.
- Integrated Firebase for cloud storage and vector data management, enabling scalable file handling and real-time data synchronization.
- Set up Google Tag Manager (GTM) for in-depth analytics, viewer tracking, scheduling notes, and event monitoring across the site.
- Designed and delivered a **6-Step Service Delivery Process**: (1) *Discovery* — requirements gathering and scope definition; (2) *Architecture* — system design and tech stack planning; (3) *Development* — iterative feature building across frontend and backend; (4) *Integration* — API wiring, Firebase setup, and third-party services; (5) *QA & Testing* — end-to-end testing, performance benchmarking, and bug resolution; (6) *Deployment* — production deployment, monitoring setup, and post-launch support.

AI Chatbot

Python, RAG, LLMs, REST APIs, JSON Pipelines

- Designed and implemented a scalable, workflow-driven chatbot architecture integrating multiple backend services via API orchestration, enabling real-time, event-driven response handling with robust JSON-based data transformation pipelines.
- Developed a rubric-based evaluation framework to systematically assess and improve AI response quality, enhancing accuracy, consistency, and overall user interaction reliability.

Achievements

- Supported a private business organization by managing application traffic (700+ requests) and server operations, contributing to improved system responsiveness, reliability, and uninterrupted service performance.
- Awarded Google Cloud Study Jam badges in Generative AI and Cloud Computing (2024) for successfully completing hands-on learning paths covering cloud fundamentals and AI concepts using Google Cloud tools and services.
